In consideration of **Innomp Group Limited** (the “Company”) agreeing to enter into over-the-counter (“OTC”) derivative transactions (including but not limited to contracts for difference, foreign exchange, indices, commodities, bonds, and shares) with the undersigned (the “Customer”, “you”, “your”), you hereby acknowledge, represent, and agree as follows:

1. Trading is Highly Speculative and Risky

Trading OTC derivatives is highly speculative, involves a significant risk of loss, and is not suitable for all investors. It is appropriate only for those Customers who:

- (a) understand and are willing to assume the economic, legal, and other risks involved;
- (b) are experienced and knowledgeable in trading derivatives and the relevant underlying markets; and
- (c) are financially capable of sustaining losses far in excess of deposits or margin.

You may lose the entire value of your account, not just the margin or deposit. Derivatives are not appropriate investments for retirement or long-term savings. You represent that you are able and willing to assume these risks and that the loss of your entire account balance will not materially affect your lifestyle.

2. Risks Related to Long Positions (Purchases)

A long position involves buying a derivative in expectation that the underlying asset will rise in value. You will profit if the market rises while your position is open, but you will incur a loss if the market falls. Potential losses may exceed your initial deposit. If you lack sufficient margin, your position may be closed at a loss.

3. Risks Related to Short Positions (Sales)

A short position involves selling a derivative in expectation that the underlying asset will fall in value. You will profit if the market declines, but you will incur a loss if the market rises. Losses may substantially exceed your initial margin, and your position may be closed if you fail to maintain margin requirements.

4. Leverage Risk

OTC derivatives are highly leveraged. A small movement in the underlying price may result in a disproportionate gain or loss. While leverage can magnify profits, it equally magnifies losses, which may occur rapidly and exceed your deposits. The greater the leverage, the greater the risk.

5. Margin Requirements

You must maintain margin at all times on open positions. You are solely responsible for monitoring your account. If margin falls below required levels, the Company may issue a margin call or immediately liquidate positions without notice. You remain liable for resulting losses.

6. Cash Settlement

All derivative transactions are settled in cash. You have no right to demand delivery of the underlying asset. The difference between the opening and closing price determines profit or loss.

7. Prices, Margin and Valuations by the Company

Prices quoted, valuations of positions, and margin requirements are determined by the Company and may differ from prices available elsewhere. Your performance therefore depends on both market fluctuations and the Company's pricing methodology. Each underlying asset carries unique risks affecting contract outcomes.

8. No Rights to Underlying Assets

Entering into a derivative does not give you ownership, title, or rights in the underlying instrument. You cannot vote, receive dividends, or otherwise participate in the underlying market.

9. Currency Risk

Where the underlying is denominated in a currency other than your account's base currency, settlement may be affected by exchange rate fluctuations. Your profits or losses may be reduced or increased by currency movements beyond your control.

10. Immediate Execution and One-Click Trading

Orders placed on the Company's platform are executed immediately upon clicking "Buy" or "Sell." Once submitted, such orders cannot be cancelled, amended, or reviewed. You accept the risk of immediate and irrevocable execution.

11. No Advisory or Fiduciary Duty

The Company does not act as adviser or fiduciary. Generic market commentary, research, or recommendations provided are not personal advice and may not take into account your circumstances. All trading decisions are your sole responsibility. The Company disclaims all fiduciary obligations and liability for actions taken in reliance on such commentary.

12. Recommendations Not Guaranteed

Any generic recommendations or analyses provided by the Company reflect judgment at the time and may be inconsistent with the Company's own positions. The Company cannot guarantee accuracy, completeness, or that reliance on such information will reduce trading risks.

13. No Guarantees of Profit

There is no guarantee of profit or of avoiding losses. No representative of the Company has made such guarantees. You confirm that you have not relied on any representation of guaranteed returns.

14. Internet Trading Risks

Online trading involves risks including technical failures, interruptions, delayed execution, communication errors, and system outages. The Company shall not be liable for losses arising from internet, communication, or system failures, regardless of cause.

15. Quoting Errors

In the event of a pricing or quoting error (including typographical, system, or communication errors), the Company reserves the right to adjust or void affected trades and correct account balances. Disputes shall be resolved on the basis of fair market value at the time of error, as determined by the Company in good faith.
